Shading_Chart.jpg
CB_Flash_Wizard_User_Manual.pdf

WHAT IS MATHLIB.PRC:

MathLib.prc is included in the prc file that you will install and is a free shared library that can be used by any Palm OS 2.0+ program that requires IEEE 754 double precision math functions. It's distributed under the terms of the GNU Library General Public License, and is freely available with full source code and documentation at the MathLib Information web page. MathLib.prc is not a part of Color Background Flash Wizard nor was it written by me. You have not purchased MathLib.prc with your purchase of Color Background Flash Wizard. A free copy has been included in this package so that you won't have to look for it on the internet and download it.

INSTALLING COLOR BACKGROUND FLASH WIZARD®:

Tap the Hot Sync icon in the applications screen (home screen) of your Palm hand-held and you will see "HotSync" displayed in the upper left corner and the "User Name" displayed in the upper right corner of the screen. Start up "Palm.exe" and "Palm Quick Install.exe" on your Desk Top PC. Select the User Name on the upper right corner of

both applications that matches the HotSync name on the Palm hand-held. Connect the hand-held to the PC using a Sync Cord. Drag “CBFlashWizard.prc” into your PDA QuickInstall utility. Tap the HotSync button (just to the right of the writing area on your Palm PDA) to install Color Background Flash Wizard[®] and its required libraries. Just follow the instructions on the screens. If, after that action is complete, there is a Flash Wizard icon on the menu that says “Install”, tap it to complete the installation. After installation is complete, you will see this icon:

CBFlashWiz...

PRINTING YOUR SHADING CHART & GRAY CARD:

Take the two Jpeg files to a professional printer and ask them to print the Shading Chart on 13” x 19” Canon glossy paper using a Canon printer. The Canon paper is extremely durable. If you get it dirty, you can actually wash it off under the faucet. Get the Gray Card printed on 8-1/2” x 11” glossy Professional Canon Paper. Using photo spray glue, mount both photos on smooth flat paperboard.

USING COLOR BACKGROUND FLASH WIZARD[®]:

Download and read the Color_Background_Flash_Wizard_User_Manual.pdf. Please note that when you tap the calculate button and after the calculation screen appears it may take 5 or 10 seconds for all the distances to be updated, so don’t immediately start writing down numbers. Some models are slow to return to the Main Screen after calculating.

HOW YOU CAN PURCHASE THE FULLY FUNCTIONAL COLOR BACKGROUND FLASH WIZARD[®]:

Go to

www.lightingcalculators.com/buy.htm

and purchase Color Background Flash Wizard[®] through PayPal's secure site.
